RESET GAZETTE

VOLUME 10 NUMBER 1 1995
SERVING THE SECONDARY COMPUTER MARKET SINCE 1985

IN THE AGE OF RECYCLING:

Ever wonder what happens to all the computers that are being replaced by newer, faster, and high-tech machines?

The world's population is getting larger and people are getting busier everyday and as a consequence much of the world has become a "throw away" society. As the landfills are getting filled the environmentalists are urging us to be more careful with our actions. We must all be careful in what we throw away to avoid having our communities turn into a large trash heap. Today many cities all over the United States are engaging in curbside recycling of cans, plastics, glass, and newspapers and many drop off centers have been set up to further the recycling effort. Schools are encouraging and teaching kids about recycling, mulching mowers are being used more than ever due to city restrictions on throwing away grass clippings, grocery stores are using recycled paper/plastic bags as well as encouraging customers to use their own cloth bags, and recycled paper is showing up almost everywhere office supplies are sold. Even with all the effort that is being exerted towards recycling only 14% of the garbage is recycled per year in Texas.

To ease the tension on the landfills Computer Reset has taken this effort one step further. We have begun to recycle computers, monitors, keyboards, printers, and parts. Most of the computers that are being replaced are simply being thrown away and never thought of again. By recycling these computers we hope not only to save the landfills, but to also increase the number of households, students, and small businesses that are using computers. In turn this will also increase the number of children that are using computers and will result in a better educated work force for the future. Computer Reset of Dallas, Texas is a leader in the movement to recycle used computers in our nation.

We can no longer afford to act in such a careless, throw away lifestyle. It is vital that we take prompt action and responsibility to keep our planet clean not only for ourselves and our children, but for the wildlife and nature that is in danger as well. The future of the earth is in our hands.

For your convience Computer Reset is now accepting Master Card, Visa, and American Express. This will allow us to process the orders faster, more efficiently, and with less paper work. Catalogs by E-Mail and Internet coming soon.

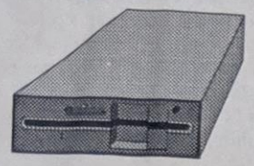
SECOND FLOPPY DRIVE



The IBM PCjr can operate either two the 51/4" 360K disk drives or two of the 3-1/2" 720K disk drives or one of each. (1.44 MB floppy drives can NOT be operated on the IBM PCjr) DOS 3.2 or later is required for the 720K drives .

Either the 5-1/4" or 3-1/2" drive is mounted in a stand-alone cabinet. The 5-1/4" drive cabinet has its own power supply; the 3-1/2" drive draws power from the PCjr.

A Modem Slot Second Disk Drive Control Card plugs into the PCjr internal modem slot and connects to the existing disk drive control card and the second disk drive by a new supplied cable. This drive controller can only be used when the internal modem slot is not used by a modem. An external modem can then be used with the computer when this controller is installed.

A Connecting signal cable joins the Modem Slot Controller to the existing internal disk drive and to the second drive. Enabling software contains files to configure your DOS boot disk for operating tow disk drives.

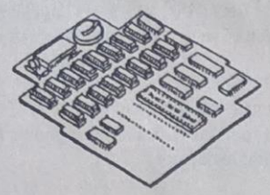
The Second Disk Drive is compatible with all side-mounted memory products, such as those manufactured by IBM, AST, Tecmar, Quadram, Microsoft, and Impulse.

5-1/4" 360K Second Disk Drive System $129

3-1/2" 720K Second Disk Drive System (DOS 3.20 required - not included) {Call for Availability on this product due to a shortage of compatible disk drives} $149

Modem Slot Kit includes controller, cable, and software (no drive or cabinet) $49

jr HOTSHOT RAM UPGRADE



The jr HOTSHOT provides a RAM upgrade beginning at 128K and extending to 384K or to the DOS and System Maximum of 640K. This device plugs in to the 8088 Microprocessor socket and does not require any additional power to operate. Enabling software is supplied to operate or turn on the memory with the computer is booted up or started. Step by Step Instructions make instillation easy.

See HOW-TO-TEL Section below to determine if your PD jr computer can use this memory upgrade. Only about 2 out of 100 can not use the jr HOTSHOT because the 8088 microprocessor is soldered in.

IBM PCjr THIN FONT VIDEO ROM

The video ROM in the PCjr displays characters made up of tiny dots of light. If you look closely at the screen, you will see that the lines which make up the text characters are two dots thick (see illustration below). This is the normal way for the VIDEO ROM to work. The Thin Font ROM, however, changes this so that the lines which make up the text characters are only one dot wide, thus making them appear sharper. There are two versions of the Thin Font ROM available, one which has characters in a Serif font, similar to the normal characters, and a dual chip which has a switch allowing it to be switched to Sans-Serif for a clean, high-tech look.

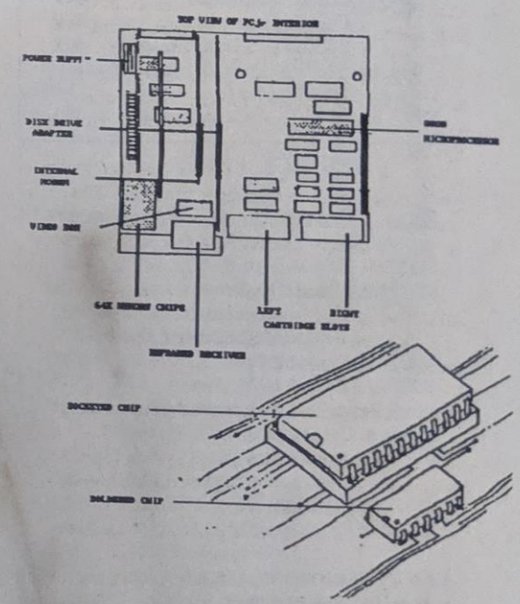
HOW - TO - TELL IF YOU CAN USE THE NEC V-20 CHIP OR THE jrHOTSHOT

In order to use the NEC V-20 to replace the 8088 chip in your computer, the 8088 must be installed in a socket so that it can be removed. The same is true of the jrHotshot memory expansion. While most PCjr computers will have a socket, the last units to be produced by IBM did not, so you need to check your computer before ordering either of these products. Of course, if your 8088 is soldered down, we can install a socket for you for $45, plus return shipping (See PC jr Service Instructions).

To check your PCjr, remove the top cover by snapping it loose from the case along the rear edge (if it is very tight, a flat-head screwdriver inserted in one of the three slots along the back will help pry it loose). Compare the inside of your PCjr with the diagram shown. You will need to locate the VIDEO ROM chip which is directly behind (and partially under) the INFRA- RED RECEIVER module. Look at this chip closely, and compare it to the drawing to the right. If it looks like it is sitting higher than the smaller chips around it, as shown, it is socketed. If it is sitting at the same height as the others, it is soldered and you will need to have a socket installed.



IBM PC jr Adapters & Parts

The parts and prices listed below are for sale of the parts. Exchange only parts are noted with an (*). Parts that qualify for exchange are those in original and unserviced condition. Previously serviced or modified parts are subject to an additional 40% charge. Parts shipped in advance of receipt of bad parts require a 100% core charge to be refunded provided bad parts are received within 30 days. Parts listed are new, refurbished, or working parts.
